

COMPACT. POWERFUL. OZONE GENERATOR.

Ozone is a powerful oxidizing agent used for water treatment globally. Ozone treats water in the same way as chlorine, but without a chemical byproduct, storage of dangerous chemicals, or complex dosing regimens. Ozone may be used to prevent stagnation of water that will be stored for long periods of time.

The RainFlo MiniGen03 is an economical ozone generator designed to purify and improve water quality in storage containers up to 15,000 gallons under ideal conditions. The process of purifying water with ozone can be affected by temperature and initial water quality. For applications in warmer climates or with excessively poor initial water quality, oversizing ozone generators to ensure adequate capacity is recommended. The compact, powerful MiniGen03 is easy to install and can be mounted outside near the storage tank using a standard 120V electrical outlet. With ozone output of 0.75 grams per hour and a maximum depth of 4 feet, rely on the MiniGen03 for dependable water treatment.

Key Applications:

- Rainwater
- Pool/spa
- Well/potable water storage
- Stock tanks
- Fire protection tanks
- Water purification
- Irrigation/greenhouse

SPECIFICATIONS

	OZ 750
Ozone output	0.75 gram/hr
Pressure	~16kPa/2.32 PSI
Input voltage	120V
Operating current	.23A
Power consumption	25W
Ozone tubing/Diffuser stone	20'/4' max depth
Dimensions	8.75"H x 9"W x 5.5"D
